

HOW TO CLEAN YOUR HOT TUB FILTERS

1. Use a garden hose to rinse the filter.

2. Spray the filter with a spa filter cleaner or degreaser, then rinse with a garden hose.

3. Spray the filter with a spa filter cleaner or degreaser, let soak overnight, then rinse with a garden hose.

4. Once your filter is cleaned, replace the filter and turn the power back on.

Regular monthly filter cleaning is an important hot tub maintenance that will extend the life of your filter. When cleaning the spa filter, always inspect for signs of wear and tear. A hot tub filter replacement is needed when the hot tub filter is discolored or shows wear on the rubber.
